- **PACKAGED** in variety of colours and w/wo flag
- **LABELLED** in preferred languages
- **BAG OR BOX** packagings on custom design

TESTED AND CERTIFIED

Designed to provide an immediate solution in emergency situations or where the food supply is complex.

The absolute priority is high quality and food security.

INFINITE NO. OF COMBINATION

Holding client satisfaction as our highest priority, we tailor ration packs to your custom needs. Thanks to individual dose packaging for most of the products we are able to prepare efficient and cost optimized deliveries to your disposition.

HMA.24H RATION

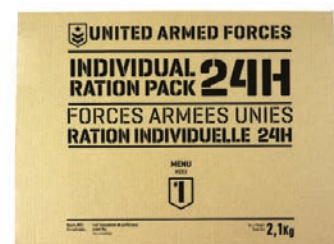

- **BAG**, 3.500 kcal / 2.1 kg

This is the one our clients use the most. It is normally based on a three-meal menu (breakfast, lunch and dinner), and also contains additional products for heating or hygiene. The main dishes are packaged in flexible aluminum bags, one of the most advanced food-packaging systems. The average caloric content is 3.200 kcal.

- **BOX**, 1.700 kcal / 1.2 kg

It's composition is similar to the 24h ration in a bag, but by using tins instead of aluminum bags to package the food, we are able to cut down on the ration's average cost.

- **PLUS - BAG**, 4.200 kcal / 2.6 kg

This is a version with a greater caloric content for operations that entail extreme physical effort. With a weight-per-ration similar to the 24h ration, we have managed to increase the caloric content up to 4.200 kcal.

- **MODULAR**, 3.400 kcal / 2.0 kg

This is divided into 3 separate packages for breakfast, lunch and dinner. Each one of them is lightweight, transportable and self-sufficient, so they are ideal to cut down on waste with irregular operations where we don't know the troops needs beforehand.

- **COLD CLIMATE**, 5.000 kcal / 1.4 kg

This was specifically designed for operations in areas with very low temperatures, where high energy value and low weight are required to prevent user fatigue. The main dishes are freeze-dried, due to the risk of food freezing.

- **DESERT / JUNGLE**, 3.500 kcal / 2.1 kg

This ration is designed with a three-main dish configuration, but with isotonic and rehydration products to replace electrolytes and minerals lost through perspiration in climates with extreme heat.

HMA.12H RATION

- **12H**, 2.000 kcal / 0.9 kg

This ration is a lightweight option in case the user only needs two main meals. Normally, it contains breakfast and lunch, as well as supplementary snacks, for an energy intake of approximately 2.000 kcal.

HMA.RATION - SURVIVAL

• SURVIVAL, 1.000 kcal / 0.5 kg

This is designed to be consumed in the event of an emergency. The products it contains provide up to 1.250 kcal and can be consumed without being heated. Packaged in a small-sized metallic box, weighing only 500 g, this is the ideal option to be transported at any time.

HMA.RATION - 10 PERSON

• BOX, 40.000 kcal / 20 kg

These rations are designed for operations with encampments that have basic kitchens. This is a box with everything necessary to make different recipes to feed 10 people for 24h, with menus up to 4.000 kcal. They include instructions to prepare different recipes with its different contents.

INFINITE NO. OF COMPONENTS
